20 June 1967

MEMORANDUM FOR THE RECORD

SUBJECT: BSX-003 Imagery

1. A review of the items contained in the message IPIR and the IPIR for Mission BSX-003 flown on 10 June 1967 reveals the following data relative to imagery quality. Of the frames reported, 57% were rated good, 26% fair and 16% poor, and the remainder not rated.

2. Attached herewith is a listing of all of the "poor" imagery contained in the cable IPIR and in the IPIR for the mission.

3. There is little correlation between the frames/items rated "poor" quality and aircraft perturbations. There is almost complete correlation between the "poor" imagery and reported contributing factors such as weather and obliquity.
